

SP vs SB vs SD Comparison Cheat Sheet

The three ad types side by side, and when each one earns its place in the budget.

Side-by-side comparison

	Sponsored Products	Sponsored Brands	Sponsored Display
Targets	Single ASIN	Whole brand / product set	Single ASIN
Targeting method	Keyword or product	Keyword or product	Product, audience, or remarketing
Placement	Search results, product pages	Top of search, mid-search, Store	On- and off-Amazon display
Requires Brand Registry	No	Yes	No (some audiences yes)
Funnel stage	Bottom — purchase intent	Mid — brand consideration	Top/mid — awareness & win-back
Typical ACOS pattern	Lowest, most controllable	Higher than SP, brand-building spend	Highest variance, judge over weeks not days

When to use which

- **Sponsored Products** — always-on for every live ASIN. It's the format that captures a shopper who already typed a specific search and is ready to buy.
- **Sponsored Brands** — once you're Brand Registered and have 2+ products worth cross-selling. Use it to win the comparison moment before a shopper commits to a specific listing.
- **Sponsored Display** — to recover shoppers who viewed but didn't buy (remarketing), or to reach new-to-brand shoppers off-Amazon. Not a substitute for SP's bottom-funnel role.

A mature account usually runs all three together

SD builds awareness and recovers lost consideration -> SB wins the brand-level comparison -> SP closes the sale on the specific ASIN a shopper searched for. Cutting any one of the three doesn't just lose that format's sales — it can weaken the others too, since they reinforce the same shopper's path to purchase.
