

VA Weekly Task Checklist

The recurring tasks that keep an account healthy between full audits.

Every week, per account

Task	Why
Pull the Search Term Report for all Auto/Broad campaigns	Feeds the negative-keyword and exact-match harvest loop
Add new negatives for zero-order search terms with meaningful clicks	Stops repeat waste on the same bad terms
Promote proven converters to their own Exact keyword with a calculator bid	Moves winners into controlled, scalable spend
Check budget pacing on every campaign	Catches campaigns capping out early or barely spending
Review placement report; adjust bid modifiers if needed	Placements can shift performance week to week
Spot-check ACOS/TACOS against the account's target	Early warning before a small drift becomes a big miss
Note anything unusual (spend spike, sales drop, stockout) for the client	Keeps support proactive instead of reactive

Every month, per account

- Full campaign structure review — anything that should be split, merged, or paused.
- Re-check bid calculator inputs (CVR, average order value) against the last 30 days' actuals.
- Review the negative keyword master list for anything worth revisiting (seasonal terms, etc.).
- Send the client a summary report covering trend, not just the latest week's numbers.

Before you close your laptop

- No campaign should be left with an unreviewed budget-cap alert.
- Every negative keyword you added today is logged in the master list, not just in Campaign Manager.
- Anything you're unsure about is flagged for your lead/mentor — don't guess on client budget.

This is a baseline checklist. Some accounts need more frequent checks (new launches, high spend) or fewer (stable, low-touch accounts) — adjust cadence with your team lead's sign-off.
